

# Project Cost Tool

Get on top of your project costs with this easy to use template. Free of charge!

This tool was developed to create a simple overview of project costs in Excel for a 12 week (or month) project.

Each resource is entered into the RESOURCE table (columns Q and R), including hourly rate.

The budgeted sum of hours is entered once only at the start of the project.

The estimated sum of hours is modified as new facts become known which change the projected figures for the project.

The actual outcome is entered as time reports are received and the true outcome is recorded.

No cells are protected, this template is open for modification.

Download the tool today and get on top of your Project costs.
